Let’s Go on a Safari — Right From Home!

When you think of Africa, some of the first things that might come to mind are the beautiful and unique animals that live there. There are so many amazing animals found across the continent (which is HUGE and has 56 different countries!). If you ever want to marvel at God’s beautiful creation, just spend some time learning more about the many animals found in Africa.

Some of the first animals I think of when I think about Africa are elephants, giraffes and rhinos. And guess what? We’re going to make some awesome 3-D cutouts of those three animals! All you need is a pair of scissors and some coloring utensils (crayons, markers or pencils will all work great), and before you know it, we’ll be heading out on an African safari — right from home!
